EDUCATION

Maharaja Agrasen University

Bachelor of Technology in Computer Science; GPA: 8.5

Baddi, India

Apr 2015 – Jul 2019

EXPERIENCE

Senior Software Engineer

Sep 2023 – Present

Global Logic

Bangalore, India

- Engineered a high-performance Card Scanning module for a major telecom application, utilizing optimized image processing to boost scanning success rates by **124% (from 33% to 74%)**.
- Spearheaded the migration of the data layer from GSON to **Kotlinx Serialization**, achieving a **20% increase in parsing speed** and significantly reducing memory overhead.
- Architected scalable components for a **Server-Driven UI (SDUI)** system, enabling dynamic interface updates and A/B testing without requiring App Store releases.
- Led the decoupling of a monolithic codebase into feature-specific modules, enabling parallel development streams and improving build times for the core team.
- Optimized application startup time by profiling bottlenecks and integrating the **Jetpack App Startup** library, resulting in a seamless cold-start experience.
- Recognized with a **Certificate of Appreciation** (Feb 2025) for exceptional delivery and innovation in core architecture optimization.

Senior Android Developer

Aug 2022 – Aug 2023

AppyHigh LLC

Gurgaon, India

- Orchestrated a comprehensive refactoring of the *Instore* app (2M+ downloads), utilizing R8/ProGuard optimization to reduce APK size by **75% (80MB to 20MB)**, driving higher install conversions.
- Maintained product stability for millions of users by establishing quality gates, achieving a **99.9% crash-free rate** via Firebase Crashlytics monitoring.
- Designed and implemented a serverless “Refer and Earn” reward system, leveraging local logic to eliminate backend costs while increasing user retention.
- Revamped the UI/UX for the *Collage Maker* app (50k+ downloads), implementing dynamic layouts and custom views to improve user engagement.
- Mentored junior developers on Android best practices, code reviews, and architectural patterns (MVVM/Clean Architecture).

Software Engineer

Feb 2019 – Aug 2022

JungleWorks (ClickLabs)

Chandigarh, India

- Developed critical features for the *Mr. Delivery* and *Logistech* suites, including multi-merchant carts, payment gateway integrations (Stripe, HyperPay), and real-time driver tracking.
- Awarded **Employee of the Month** for demonstrating ownership and delivering critical features ahead of schedule.

OPEN SOURCE, TOOLS & PERSONAL PROJECTS

Study AI KMP | Kotlin Multiplatform, Compose, Ktor, LLM Agents

[Play Store](#)

- Architected a cross-platform education app with **10k+ installs** and **2.5k MAU**. Built a custom backend using Ktor Server with LangChain and Koog, implementing **round-robin load balancing** for cost-effective LLM inference.

JsonBox IntelliJ Plugin | IntelliJ Platform SDK, Kotlin

[JetBrains Marketplace](#)

- Developed an open-source Android Studio/IntelliJ plugin (**500+ downloads**) to streamline JSON parsing and comparison within the IDE, directly enhancing developer productivity.

BundleTool UI Desktop | KMP (JVM), Compose Desktop

[GitHub](#)

- Built a desktop GUI wrapping Google’s **bundletool**, simplifying AAB-to-APK conversion and keystore signing for Android developers (34+ GitHub Stars).

Open Source Libraries | KMPalette, Ktor Starter

[GitHub](#)

- Authored **KMPalette** (Dynamic Theming library listed on klibs.io) and a **Ktor-LLM Starter Kit** (featuring AI Agent architecture), promoting modular design in the Kotlin ecosystem.

TECHNICAL SKILLS

Languages: Kotlin, Java, SQL, Python

Architecture: MVVM, MVI, Clean Architecture, Server Driven UI (SDUI), Modularization, Microservices (Ktor)

Mobile: Kotlin Multiplatform (KMP), Jetpack Compose, Coroutines, Flow, Dagger Hilt, Retrofit, Room DB, ProGuard/R8

Backend & AI: Ktor Server, LangChain4j, LLM Agents, Round-Robin Load Balancing, Docker, Mongo DB

Tools: IntelliJ Platform SDK, Firebase (Analytics, Crashlytics, Firestore), Git, CI/CD, Gradle
